

## Why Jeeves? **Flexibility**

WIKIPEDIA  
*The Free Encyclopedia*

*Flexibility refers to the ability of a system to respond to potential internal or external changes affecting its value delivery, in a timely and cost-effective manner. Flexibility is the ease with which the system can respond to uncertainty in a manner to sustain or increase its value delivery.*

With Jeeves we will get a flexible system that we can implement cost efficiently and quickly and that is well adapted for an international business like ours.”

Anders Clemensson, Global Operations Director, NORD-LOCK International, Sweden

Ten years ago, the future was ten years away. Five years ago the future was three years away. Today, the future is tomorrow. The market is constantly demanding more and more from companies when it comes to identifying and then rapidly meeting changes while still being effective. Flexibility is a key requirement for your ERP investment.

### **MAKE SURE YOUR ERP IS READY FOR THE FUTURE**

In today's competitive marketplace, the only thing companies are sure of is that change is inevitable. In order to remain competitive, businesses must be proactive and ensure that their ERP system will be able to keep up with and quickly flex to these changes.

### **THE BEST OF BOTH WORLDS**

At Jeeves, we believe in “customized standard”. Organizations will no longer have to make the difficult decision of choosing between sticking with the “vanilla” standard of most ERPs or going with the system that has the ability to easily add on and personalize.

We provide you with the best of both worlds. With Jeeves unique

architecture, experience the benefits of standardized software such as a community of users continuously developing and evolving the functionality of the software, quick and easy upgrades and a low total cost of ownership. Further, reap the rewards of undeniable flexibility!

### **CHANGE WITHOUT HASSLE**

The key to easily implementing changes is again due to the architecture of Jeeves, making Jeeves one of the market's easiest systems to customize. The system can be adapted to fit your business processes, avoiding the workarounds of forcing your business fit to into the system.

Jeeves is a modern, user friendly, adaptable, and flexible ERP solution, which permits us to benefit from great functionality.”

**Jean-Michel Galliou,**  
IT-Manager,  
Mecelec, France

*With Jeeves you don't have to chose between the advantages of a standard ERP and the flexibility of a customized solution. You can have both!*

Minimize the cost of consultants and the complexity of behind-the-scenes customizations. Jeeves features macros which enable customers to make many of their own changes to forms, reports, processes and routines, and tables. Imperative to Jeeves' unparalleled ease of personalization and continuity with upgrades is that it operates on two databases -one database for standard functionality and another for the macros and personalizations. Consequently, your customizations are carried forward with all upgrades

without the added cost to “upgrade” them separately to have them continue to work.

Further, due to the separate databases, adaptations can be made on different levels without affecting another level. Upgrading to a new release will not affect partner add-ons, customer specific developed functionality or downloaded apps.

**INTEGRATION IS CRITICAL**

Jeeves strives to be top-notch in the ERP world and part of that

is empowering its customers to integrate third-party solutions and partner add-ons to further meet any additional needs.

Consequently, Jeeves has a very open architecture which makes it ideal for integrating with other solutions and partner add-ons.
